

VECTOR reading file

| Code | Line Cost | # Times Executes | Total Cost |
|-------------------------|-----------|------------------|------------|
| Loading file | 1 | 1 | 1 |
| Create vector | 1 | 1 | 1 |
| Call function csvParser | 1 | 1 | 1 |
| For loop rowCount | 1 | n | n |
| Total Cost | | | 3n |
| Runtime | | | O(n) |

VECTOR creating object

| Code | Line Cost | # Times Executes | Total Cost |
|------------------------------|-----------|------------------|------------|
| Call function loadCourses | 1 | 1 | 1 |
| Read size of course | 1 | 1 | 1 |
| For loop iterating each row | 1 | n | n |
| adding courseName to vector | 1 | 1 | 1 |
| Adding courseTitle to vector | 1 | 1 | 1 |
| Pushback into course vector | 1 | n | n |
| Total Cost | | | 2n+2 |
| Runtime | | | O(n) |

HashTable reading file

| Code | Line Cost | # Times Executes | Total Cost |
|--|-----------|------------------|------------|
| Create new hash table | 1 | 1 | 1 |
| LoadCourses into courseTable | 1 | n | n |
| Parse file with for loop | 1 | n | n |
| Push courseName and Title with insert function | 1 | n | n |
| Total Cost | | | 2+4n |
| Runtime | | | O(n) |

HashTable creating object

| Code | Line Cost | # Times Executes | Total Cost |
|------------------------------------|-----------|------------------|------------|
| Key created as hash | 1 | 1 | 1 |
| IF loop with 3 arguments | 1 | n | n |
| WHILE loop as long as its not null | 1 | n | n |
| Node is pointed to new node | 1 | n | n |
| Total Cost | | | 1+3n |
| Runtime | | | O(n) |

BinarySearchTree reading file

| Code | Line Cost | # Times Executes | Total Cost |
|-------------------------------|-----------|------------------|------------|
| Binary tree is created | 1 | 1 | 1 |
| loadCourses is called | 1 | 1 | 1 |
| For loop itereating thru file | 1 | n | n |
| Insert function is called | 1 | 1 | 1 |
| Total Cost | | | 2+n+1 |
| Runtime | | | O(n) |

BinarySearchTree creating object

| Code | Line Cost | # Times Executes | Total Cost |
|------|-----------|------------------|------------|
|------|-----------|------------------|------------|

| | | | |
|-------------------------------|---|---|-------------|
| If for New node is created | 1 | n | n |
| Else node is added | 1 | n | n |
| AddNode function called | 1 | 1 | 1 |
| If loop comparing to node | 1 | n | n |
| Nested if loop to create node | 1 | n | n |
| If loop for right node | 1 | n | n |
| Total Cost | | | $4n + 1$ |
| Runtime | | | $O(\log n)$ |

EVALUATION and RECOMMENDATION

We looked at the vector, hash table and binary tree data structures to evaluate the time complexities and worst-case scenario as it pertains to Big-O.

After evaluating all the time complexities of each data structure, it seems they are all equally $O(n)$.

Considering that vector utilizes a quicksort to be able to organize the data, and the binary search tree also involves a $\log(n)$ function, we would be able to recommend that the Hash Table is the most appropriate choice for the Computer Science department at ABC.
